Others informations deemed useful for the interpretation of the results:

The reported uncertainty "I" is the expanded uncertainty calculated using a coverage factor of 2 which gives a confidence level of approximately 95. For microbiological research are indicated the upper and lower limit of the confidence interval with level of probability of 95% K=2 or the interval itself. The results of the tests are issued in accordance with the law ISO 7218:2007.

When the results are <4 (UFC/ml) or <40 (UFC/g) the microorganisms are present but fewer than 4 (UFC/ml) or 40 (UFC/g).

"n.r.": < to detection limit LOD (if it is not indicated it is necessary to look at the limit of quantification LOQ).

Please note that each result expressed as "n.r." does not indicate the absence of the parameter in the sample.

LOQ: limit of quantification: It is the lowest analyte concentration in the sample that can be detected with acceptable accuracy under well specified conditions.

LOD: detection limit: it is the lowest analyte concentration in the sample that can be detected but not necessarily quantified under specific conditions. In the case of quantitative analyses it isn't indicate.

ND/D: Not Detectable, Detectable

When the sampler is not a laboratory technician, the sampling description data shall be provided by the person who performed the sampling and the laboratory shall not be responsible for those data, including any influence on the validity of the results. The results included in the assay report are refered to the sample received.

Conformity opinions: values that comply with and do not comply with laws, decrees, national and EU regulations, specifications provided by the customer are assessed on a case-by-case.

Rec%: Recovery% it indicates the recovery that has been applied to the result where it is positive.

Exclusions from ISO 17604: 2015 accreditation = if the sampling is performed by the customer, chapter 8 of the ISO 17604: 2015 standard is excluded from accreditation. Chapter 9 of the ISO 17604: 2015 standard is also excluded if transport is also the responsibility of the customer

Exclusions from ISO 18593: 2018 accreditation = if the sampling is performed by the customer, chapter 7 of the ISO 18593: 2018 standard is excluded from accreditation. Furthermore, chapter 8 of the ISO 18593: 2018 standard is excluded if the transport is also the responsibility of the customer
